ReproNET Symposium 2025

15/10/2025

From 15 to 16 October 2025, our group had the opportunity to take part in the ReproNET Symposium 2025, held at Nynäs Havsbad, Sweden, and organised by the Karolinska Institutet's ReproNET network, which forms part of the StratRegen strategic area dedicated to stem cells and regenerative medicine.

Our team attended this inspiring two-day event, which brought together leading researchers in reproductive biology, early development and regenerative medicine. The symposium featured discussions on the latest advances in topics ranging from the genetic regulation of fertility and endometrial biology to stem cell-based models of early human development, foetal therapies, and the role of the reproductive microbiome in health and disease.

We also had the chance to enjoy the wonderful city, its history and its cuisine – a truly wonderful experience in every sense.
